## **Company profile**

**The** Ingenieurbüro Seewöster GmbH is an **independent** engineering office, operating not only in Germany but worldwide.

**Our** field of activity lies in problem solutions for all areas of the catering sector and the peripheral areas and encloses the **whole spectrum** of the category:

**We** develop – for and with you – renovation and rationalisation proposals for existing catering facilities and industrial food companies.

**We** plan for you: canteen kitchens and food supply systems including the accompanying cold-storage arrangements for hospitals, authorities, congress centers, canteens, restaurants etc. as fresh food systems or as thermally decoupled systems (Cook chill, Sous vide). We also plan laundries for hospitals, prisons and for the industry adhering to most recent environmental and hygiene regulations.

**We** take over the specialist project management including local professional site management, cost supervision and appointment supervision and acceptance. If required, we also take over (in cooperation with suitable architect's offices and departmental planning offices) the entire project management including all crafts (construction, house technology and kitchen technology).

**We** advise on the construction of HACCP concepts, quality management systems (ISO 9000 and the following, EFQM model), hygiene management, construction of environmental concepts and disposal concepts.

### **Your advantages with Ingenieurbüro Seewöster GmbH:**

**We** work entirely independently and thus develop a concept for you without having to consider third party interests

**With our** years of experience in the area of communal catering we are able to develop a plan exactly to your needs.

**Our** up-to-date equipment with five CAD workplaces allows us to carry out our work with most modern standards. E-mail, Internet, DSL/DFÜ, data exchange are nothing new to us, but have been used for many years in communicating with our clients and planning partners.

**Our** offices in Wiesloch, Berlin and Dresden enable to us to take over the local professional site management throughout Germany. Being close to Frankfurt airport we are also optimally connected with all major cities worldwide

**Our** employees are constantly trained on your scopes of work to ensure they consider the newest hygiene and health regulations as well as law changes throughout the planning of a project.

## **Our achievements for you**

### **We plan large-scale catering establishments/ canteen kitchens for large-scale gastronomy, hospitals, congress centers, canteens etc.**

Be it for new buildings, renovation projects or restructuring:  
we develop the most economic and technically best solution.

For renovation and restoration projects, we also plan and develop interim solutions: from tent or container kitchens to temporary outsourcing – of course in line with all hygiene and workplace regulations.

For us the satisfaction of the client is in the foreground, therefore, we support you not only during the construction phase as competent specialist engineers but also after the realization as a contact for kitchen and storage organizing.

### **We develop machine and device programs**

taking into account the required storage space for all kinds of food preparation methods.

From Sous-vide to Cook & chill to the conventional cook & mix procedure: we plan optimal and economic concepts and solutions.

We provide economic efficiency analyses for your individual needs to make the decision for a certain procedure easier for you.

### **From climate control to normal cooling to freezing**

we take over the planning of the complete cold-storage technical arrangements.

If its cell construction method or conventional cold storage room isolation - we plan the technically and economically best system in accordance with your architectural situation and functional demands - we plan individually and technically feasible.

**R e f e r e n c e  
l i s t  
(Part)**

**Date: 2014-Feb-10th**

**In the accompanying reference list some of the  
planned and realized projects in recent years  
are listed.**

## Medical centers

### General plannings:

Friedrichshafen, municipal hospital	Renovation	ca. 1500 meals /d
Salem hospital, Heidelberg	Renovation	ca. 800 meals /d

### Plannings canteen kitchens and cold-storage technology:
